### 3. Frontend Workflow: Checkout Experience

## 1. Introduction

---

The **Orangecat Company Methods** module extends the B2B capabilities of Magento 2 by allowing administrators to assign specific **Payment** and **Shipping** methods to individual companies.

This ensures that each company only sees the delivery and payment options that have been negotiated or authorized for them, providing a tailored purchasing experience for B2B clients.

---

## 2. Admin Workflow: Assigning Methods

---

Administrators can manage the available methods for each company directly from the Company edit screen in the Magento Admin Panel.

### 2.1. Company Methods Assignment

Navigate to **Orangecat > Companies**, edit a company, and locate the **Sales Methods** tab. Here you can select which payment and shipping methods are allowed for this specific company.

## 3. Frontend Workflow: Checkout Experience

When a customer associated with a company proceeds to checkout, the system automatically filters the available methods based on the company's configuration.

### 3.1. Filtered Delivery Methods

Only the shipping methods assigned to the customer's company will be displayed during the shipping step of the checkout.
